

Total Commerce Management for Netsuite

Fully integrated Software as a Service ERP

For NetSuite users, Intoscape is available as a fully configured and integrated ERP solution with NetSuite and NetSuite CRM. Taking best practice from the world of eCommerce and Software as a Service (SaaS) hosted solutions, it is designed to automate and integrate key business processes including those in the supply chain management, procurement, competitor monitoring and pricing systems, and with particular emphasis on fast-moving Ecommerce companies.

Total Commerce Management for NetSuite is powered by the NetSuite platform and automates the key merchandising activities of a business: from supplier sourcing and competitor analysis to margin-based pricing calculation, inventory management and catalogue updates, substantially reducing the resources and time required to perform these critical functions.

Built with proven integration technology - NetSuite SuiteBundler

SuiteBundler is a key component of SuiteFlex, NetSuite's application development and integration platform. The SuiteBundler tools enable the creation of third-party vertical applications within NetSuite, as well as end-to-end business process customisation for any end-user company.

The combination of the two platforms creates a powerful tool for mid-market wholesale and distribution, and online retailing-dependent businesses looking to compete more effectively and efficiently in their market. As such they enable businesses to manage these multiple, complex challenges while combining 'best practices' from across the entire business environment, letting them work effectively together in a single business system.

Total Commerce Management for NetSuite delivers at IT247.com and SCC plc

The rapid and efficient growth of the IT247.com retail site illustrates capabilities that Total Commerce Management for NetSuite can bring to a business. It has enabled the business to implement Online Catalogue management of over 300,000 available lines, changed daily from multiple supply sources, monitor competitor activity and pricing, set prices for the online store and manage the back office logistics and procurement associated with high volume retail operations.

Intoscape has been fully integrated within IT247 using standard web services technology with the company's .net based dynamic web site and a secure ecommerce shopping cart and online customer relationship management centre hosted by NetSuite.

About Netsuite

NetSuite is a leading vendor of on-demand, integrated business management software suites for small to medium businesses. Their products enable companies to manage core business operations in a single system, which includes Accounting / Enterprise Resource Planning (ERP), Customer Relationship Management (CRM), and Ecommerce.

How can TCM for NetSuite help eCommerce businesses to succeed?

- An ideal tool for growing ecommerce businesses – enables them to achieve in minutes what would have previously taken weeks.
- Automate key business processes such as procurement, supply chain management, competitor monitoring and pricing.
- Enables presentation of information from internal and external sources to management via a centralised dashboard.
- Minimal HR requirement compared to traditional approaches.
- Improved business efficiency, competitive positioning and profitability.
